Darkfield Microscopy Live Blood Examination

Patient Name: _____

Appointment Date: _____

Time: _____

Live Blood Analysis (or Darkfield Microscopy) is a way of studying live whole blood cells under a specially adapted microscope that projects the dynamic image onto a screen which you will be able to watch. This allows you to view your "inner terrain".

The Practitioner takes a small sample of blood, a pin prick on the finger. This assessment enables us to see exactly what the cell structure looks like, how active the white blood cells are, and what bacteria, fungus or other particles are present.

Recommended for patients with the following

- Chronic fatigue
- Bowel disorders
- Digestive problems
- Allergies
- Blood disorders
- Cancer
- Fungal infections

You are required to fast for 3-4 hours prior to the assessment, however water is allowed.
Best time to book the assessment is in the morning.

Please let us know 48 hours in advance if you are unable to attend your appointment to avoid a cancellation fee being charged. Thank you.
